	Harmonised Transparency Template - Frequently Asked Questions
General Questio	15
uestion 1: What is t	he structure of the Harmonised Transparency Template (HTT)?
Response 1	The HTT contains 5 main worksheets (A, B1, B2, B3 and C). The first worksheet (A) includes the HTT general information. The second worksheet (B1) presents the mortgage information. The third worksheet (B2) contains the public sector information. The fourth worksheet (B3) contains shipping information. The fifth worksheet (C) represents the HTT glossary, which has a harmonised section acr jurisdictionsat the top, but also a section for national specificities below. Any additional tabs (D, E, etc.), will contain the National Transparency Template (NTT) information where relevant.
Question 2: Is the HT	going to replace the National Transparency Template (NTT)?
Response 2	The HTT is compulsory in order to be considered Covered Bond Label compliant. The NTT can be added in order to provide further information at national discretion.
Question 3: What is t	he reporting frequency of the HTT?
Response 3	The reporting of the HTT is the same as the reporting of the National Transparency Template (NTT), i.e. at least quarterly.
uestion 4: Where sl	ould the HTT be posted?
Response 4	The HTT should be posted in the same location as the National Transparency Template (NTT) is currently posted, i.e. on the issuer's website. There is no common platform for the HTT.
uestion 5: In what f	ormat the HTT should be disclosed?
Response S	The HTT should be disclosed in Excel format in so far as it is possible, as already suggested by the Label Advisory Council and investors. Where issuers are currently providing the Template in both Excel and PDF formats, they are encouraged to continue to do so.
Question 6: Where co	n I find the reporting date?
Response 6	The reporting date can be found in the Introduction Tab and in the "Basic Facts" section of worksheet A.
uestion 7: What ha	pens when I cannot complete a section of the HTT?
Response 7	When the information is either (i) not applicable for the jurisdiction, (ii) not relevant for the issuer and/or CB programme at the present time; or (iii) not available at the present time; issuers are kindly requested to include ND1, ND2 or ND3 respectively.
pecific Question	s
<u> </u>	Harmonised Transparency Template only contain disaggregated information for mortgages and public sector?
Response 8	Indeed, the HTT only provides disaggregated information for mortgage and public sector assets which represent 99.6% of total outstanding. Information in more detail on other collateral types can alw be included in worksheet E, which may contains the National Transparency Template (NTT).
Question 9: How sho	lld the "liquid assets" be calculated in the section 3 "General Cover Pool / Covered Bond Information" of the HTT?
Response 9	Liquid assets are defined as central bank eligible assets, substitute and other marketable assets. This total is calculated over both outstanding covered bonds and outstanding cover assets.
uestion 10: How sh	uld the "expected" and "contractual" columns of the "Cover pool amortisation profile" be understood?
Response 1	Contractual maturities assume no prepayment scenario unlike expected maturities. Jurisdictions/issuers publishing the two should disclosed their prepayment assumptions for the latter.
uestion 11: How sh	uld the hedging columns included in section 3 "General Cover Pool / Covered Bond Information" of the HTT be understood?
Response 1	The currency breakdown before/after hedging aims to assess the potential currency mismatch on the asset and liability sides. This is supplemented by explanations on the issuer's hedging strategy in the Harmonised Glossary.
uestion 12: How sh	uuld the cover assets and covered bonds distribution by currency be populated in section 3.6 and 3.7 in Tab A. HTT General?
Response 1	In the columns titled "Nominal [before hedging]" and "Nominal [after hedging]" if there is no hedging activity also the amounts for the single currencies should be the same in the two columns. Should there be hedging activity then the currency into which the outstanding has been swapped will receive the respective amount. For example, if all outstanding have been swapped into one currency, onld this currency will see a positive amount in the after hedging section. The sum of the columns must match the figures reported under "Total Cover Assets", respectively "Outstanding Covered Bonds" in Section 3.1 of Tab A. HTT General.
Question 13: How sh	uld the covered bonds distribution by interest rate be populated in section 3.8 in Tab A. HTT General?
Response 1	swapped into floating rate, only this line should be filled. Total amounts should show the same figures both before and after hedging.
question 14: How sh	uld arrears be populated in Tab E. Optional ECB-ECAIs data?
Response 1	Performing loans should be excluded from the "1-<30 days" bucket. If a loan is in arrears, please report the entire principal amount for the loan, not just the instalment that is in arrears.

C. Harmonised Transparency Template - Glossary

HTT 2022

The definitions below reflect the national specificities

Field Number	1. Glossary - Standard Harmonised Items	Definition
HG.1.1 HG.1.2 HG.1.3	OC Calculation: Actual OC Calculation: Legal minimum OC Calculation: Committed	Total value of cover pool subtracted nominal value of covered bonds Minimum legal required OC of RWA ND2
		Index Loans: These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Denmark in 1982. All Danish index loans have index semi-annual payment dates (January 1st and July 1st). Index loans are offered as cash loans. The maturity depends on the loan type. Especially the maturity for subsidized housing depends on the size of the future inflation rate. Fixed-rate loans: The long-term -typically 30-year – fixed-rate, callable loan is considered the most traditional mortgage loan. With this loan, the borrower knows in advance the fixed repayments throughout the term of the loan. The long-term fixed-rate mortgage loan has a prepayment option which may be exercised in two ways, i.e. the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding offer and their therest only periods.
	Interest Rate Types	Adjustable Rate Mortgages: Adjustable-rate mortgages (ARMs) were introduced in 1996 and the main advantage of ARMs is that interest rates are generally lower than those of fixed-rate loans when raised. The interest rate is generally reset at a frequency of 1, 3, 5 or 10 years and the underlying bonds are replaced by new bonds. The yield of the new bonds determines the loan rate for the period until the next interest rate reset. The lower initial loan rate should therefore be weighted against the risk that it will increase during the loan term. An ARM may be prepaid at a price of 100 in connection with each interest rate reset. Alternatively, the borrower may prepay the loan by purchasing the bonds on market terms – as with all mortgage loans. This loan type is also offered with interest-only periods.
		Money market based loans: The loan rate changes at generally three or six months. In addition, this loan type differs from ARMs as this interest rate depends on a reference rate, ie an interest rate determined in another market. The reference rate of DRK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average), an interest rate which is quoted daily by NASDAQ. This loan type is also offered with interest-only periods.
		Non Capped floaters: These are loans where the rate changes at generally three or six months. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average), an interest rate which is quoted daily by OMX NASDAQ. Capped floaters: It is possible to get a loan with a floating interest rate which cannot exceed a certain level (cap). In this way, the borrower hedges against major interest rate increases. If a loan has a cap of 65, then the interest rate can never be higher than 65. The loan rate will track CIbor (OF curbor / CIta), as long as it does not exceed 6%. A floating-rate loan may be prepaid in two ways: either at an agreed price – typically 100 or 105 – or the borrower may buy the underlying bonds at market price.
HG.1.4		Other: Any other loan types, which not comply with the above mentioned.
HG.1.5	Residual Life Buckets of Cover assets [i.e. how is the contractual and/or expected residual life defined? What assumptions eg, in terms of prepayments? etc.]	Only contratual maturity is relevant and reported. Early repayments happens at borrowes discretion is among other thing depending on interest rate developments and cannot be anticipated by issuer.
HG.1.6	Maturity Buckets of Covered Bonds [i.e. how is the contractual and/or expected maturity defined? What maturity structure (hard bullet, soft bullet, conditional pass through)? Under what conditions/circumstances? Etc.]	Only contratual maturity is relevant and reported. Early repayments happens at borrowes discretion is among other thing depending on interest rate developments and cannot be anticipated by issuer.
	LTVs: Definition	LTV is reportet continuously. The loans are distributed from the start Itv of the loan to the marginal Itv. This means that, if the loan is first rank, it is distributed
HG.1.7 HG.1.8	LTVs: Calculation of property/shipping value	proportionaly by bracket size from 0 to the marginal
HG.1.9	LTVs: Applied property/shipping valuation techniques, including whether use of index, Automated Valuation Model (AVM) or on-site audits	
HG.1.10	LTVs: Frequency and time of last valuation	Minimum once pr. year for commercial properties. Minimum once every third year for owner occupied.
HG.1.11	Explain how mortgage types are defined whether for residential housing, multi-family housing, commercial real estate, etc. Same for shipping where relecvant	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use.

Table X1 Key Concepts Explanation	General practice in Danish market	If issuers Key Concepts Explanation differs from general practice: State and explain in this column.
Residential versus commercial mortgages		
Description of the difference made between residential/owner occupied and commercial properties	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use.	
	Property which primary purpose is owner occupation is characterised as residential. Whereas properties primarily used for commercial purposes are classified as commercial (cf. below).	
Describe when you classify a property as commercial?	The Danish FSA sets guidelines for the grouping of property in categories. Examples of application of which classifies property as commercial are:	
	· Office	
E.g.: Private rental, Manufacturing and Manual Industries, Offices and Business, Agriculture.	· Retail/shop	
	 Warehouse Restaurants, inns etc. Hotels and resorts Congress and conference centres. Campsites. Traffic terminals, service stations, fire stations, auction and export houses. Agriculture Forestry Nurseries Ships 	
NPL (Non-performing loans)	A 1:	
	A loan is categorised as non-performing when a borrower neglects a payment failing to pay instalments and / or interests.	3
	The NPL rate is calculated at different time periods after the original payment date. Standard in Table A is 90 day arrear.	
	Commercial bank CB issuers adhere to the Basel definition of NPL.	
	No distinction made. Asset substitution i not allowed for specialised mortgage	
Explain how you distinguish between performing and nonperforming loans in the cover pool?	banks.	
	The Basel definition of NPL's is applied for commercial bank CB issuers	
Are NPLs parts of eligible assets in cover pool? Are NPL parts of non eligible assets in cover pool?	Asset substitution i not allowed for specialised mortgage banks, hence NPLs are part of the cover pool.	t
Are loans in foreclosure procedure part of eligible assets in cover pool?	For commercial bank CB issuers NPL's are eligible assets in the cover pool. Asset substitution i not allowed for specialised mortgage banks, hence loans in foreclosure are part of the cover pool.	
	For commercial bank CB issuers loans in foreclosure procedure are eligible assets in the cover pool.	
If NPL and/or loans in foreclosure procedure are part of the covered pool which provisions are made in respect of the value of these loans in the cover pool?	The Danish FSA set rules for loss provisioning. In case of objective evidence of impairment provisioning for loss must be made.

General explanation	General practice in Danish market	The issuer can elaborate on the applied balance principle.
Table G3		E.g. describe if stricter practice is applied than required by law
General balance principle	The general balance principle does not require a one-to-one balance between the loan and the bonds issued. This gives the credit institution a wider scope for taking liquidity risk than the more strict specific balance principle.	
Specific balance principle	The specific balance principle ensures a one-to-one balance between loans and bonds issued, and is used for the issuance of SDRO, SDO and RO bonds. The specific balance principle de facto implies full cash flow pass through from borrowers to investors. Under this principle daily loan origination is continuously tapped into the market, and the individual borrower loan rate is determined directly by the bond sales price for the corresponding financing amount of bonds. All borrower payments or interest and principal match the interest and principal payments to investors exactly (borrower payments fall due one day prior to the payments to investors.) Redemptions take place by borrowers' buy back of the financing bond in the market at market price, or for callable bonds by calling the bond at par. In the latter case the borrower prepayment match the bond draw down. Market risks are thus eliminated under this issuance model (i.e. interest rate risk, prepayment risks, liquidity risks and funding risks). Further, asset substitution is not possible under this issuance model.	

General explanation	General oractice in Danish market						
Table G4	eneral practice in Danish market						
One-to-one balance between terms of granted loans and bonds issued, i.e. daily tap issuance?	Mortgage banks issue and sell bonds to investors, who then fund the loans. During the loan terms, borrowers make principal and interest payments to mortgage banks which transfer the amounts to investors. Mortgage banks charge a margin from the borrower to cover daily operating costs, potential losses, and to make a profit. The margin is a percentage of the outstanding debt which the borrower pays throughout the loan term. The margin rate corresponds to the interest margin of a bank but is generally lower. The issuance is made on a daily basis.						
Pass-through cash flow from borrowers to investors?	Yes, the mortgage bank is an intermediary between persons requiring loans for the purchase of real properties and investors funding the loans by purchasing bonds.						
Asset substitution in cover pool allowed?	No, (due to Danish legislation) asset substitution is not allowed/possible.

Index Loans	These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Denmark in 1982. All Danish index loans have index semi-annual payment dates (January 1st and July 1st). Index loans are offered as cash loans. The maturity depends on the isac for the future inflation rate. Type: Especially the maturity for subsidized housing depends on the size of the future inflation rate.
Fixed-rate loans	The long-term – typically 30-year – fixed-rate, callable loan is considered the most traditional mortgage loan. With this loan, the borrower knows in advance the fixed repayments throughout the term of the loan. The long-term fixed-rate mortgage loan has a prepayment option which may be exercised in two ways, i.e. the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may purchase the underlying bonds in the financial markets and deliver them to the mortgage bank. This loan type is also offered with interest-only periods.
Adjustable Rate Mortgages	Adjustable-rate mortgages (ARMs) were introduced in 1996 and the main advantage of ARMs is that interest rates are generally lower than those of fixed-rate loans when raised. The
Money market based loans	The loan rate changes at generally three or six months. In addition, this loan type differs from ARMs as this interest rate depends on a reference rate, i.e. an interest rate determined in another market. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average), an interest rate which is quoted daily by OMX MASDAQ. This loan type is also offered with interest-only periods.
Non Capped floaters	These are loans where the rate changes at generally three or six months. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average), an interest rate which is quoted daily by OMX NASDAQ
Capped floaters	It is possible to get a loan with a floating interest rate which cannot exceed a certain level (cap). In this way, the borrower hedges against major interest rate increases. If a loan has a cap of 6%, then the interest rate can never be higher than 6%. The loan rate will track Cibor (or Euribor / Cib, a) slong as it does not exceed 6%. A floating-rate loan may be prepaid in two ways: either at an agreed price – Typicially 100 or 105 – or the borrower may buy the underfiving bonds at market price.
Other	Any other loan types, which not comply with the above mentioned.
