	Harmonised Transparency Template - Frequently Asked Questions
General Question	
uestion 1: What is th	structure of the Harmonised Transparency Template (HTT)?
Response 1	The HTT contains 5 main worksheets (A, B1, B2, B3 and C). The first worksheet (A) includes the HTT general information. The second worksheet (B1) presents the mortgage information. The third worksheet (B2) contains the public sector information. The fourth worksheet (B3) contains shipping information. The fifth worksheet (C) represents the HTT glossary, which has a harmonised section acripitations the top, but also a section for national specificities below. Any additional tabs (D, E, etc.), will contain the National Transparency Template (NTT) information where relevant.
Question 2: Is the HTT	oing to replace the National Transparency Template (NTT)?
Response 2	The HTT is compulsory in order to be considered Covered Bond Label compliant. The NTT can be added in order to provide further information at national discretion.
uestion 3: What is th	reporting frequency of the HTT?
Response 3	The reporting of the HTT is the same as the reporting of the National Transparency Template (NTT), i.e. at least quarterly.
Question 4: Where sho	uld the HTT be posted?
Response 4	The HTT should be posted in the same location as the National Transparency Template (NTT) is currently posted, i.e. on the issuer's website. There is no common platform for the HTT.
uestion 5: In what fo	mat the HTT should be disclosed?
Response 5	The HTT should be disclosed in Excel format in so far as it is possible, as already suggested by the Label Advisory Council and investors. Where issuers are currently providing the Template in both Excel and PDF formats, they are encouraged to continue to do so.
Question 6: Where can	find the reporting date?
Response 6	The reporting date can be found in the Introduction Tab and in the "Basic Facts" section of worksheet A.
uestion 7: What happ	ens when I cannot complete a section of the HTT?
Response 7	When the information is either (i) not applicable for the jurisdiction, (ii) not relevant for the issuer and/or CB programme at the present time; or (iii) not available at the present time; issuers are kindly requested to include ND1, ND2 or ND3 respectively.
pecific Questions	
<u> </u>	armonised Transparency Template only contain disaggregated information for mortgages and public sector?
Response 8	Indeed, the HTT only provides disaggregated information for mortgage and public sector assets which represent 99.6% of total outstanding. Information in more detail on other collateral types can alw be included in worksheet E, which may contains the National Transparency Template (NTT).
uestion 9: How shoul	the "liquid assets" be calculated in the section 3 "General Cover Pool / Covered Bond Information" of the HTT?
Response 9	Liquid assets are defined as central bank eligible assets, substitute and other marketable assets. This total is calculated over both outstanding covered bonds and outstanding cover assets.
uestion 10: How shou	ld the "expected" and "contractual" columns of the "Cover pool amortisation profile" be understood?
Response 10	Contractual maturities assume no prepayment scenario unlike expected maturities. Jurisdictions/issuers publishing the two should disclosed their prepayment assumptions for the latter.
uestion 11: How shou	ld the hedging columns included in section 3 "General Cover Pool / Covered Bond Information" of the HTT be understood?
Response 11	The currency breakdown before/after hedging aims to assess the potential currency mismatch on the asset and liability sides. This is supplemented by explanations on the issuer's hedging strategy in t Harmonised Glossary.
uestion 12: How shou	ld the cover assets and covered bonds distribution by currency be populated in section 3.6 and 3.7 in Tab A. HTT General?
Response 12	In the columns titled "Nominal [before hedging]" and "Nominal [after hedging]" if there is no hedging activity also the amounts for the single currencies should be the same in the two columns. Should there be hedging activity then the currency into which the outstanding has been swapped will receive the respective amount. For example, if all outstanding have been swapped into one currency, only this currency will see a positive amount in the after hedging section. The sum of the columns must match the figures reported under "Total Cover Assets", respectively "Outstanding Covered Bonds" in Section 3.1 of Tab A. HTT General.
uestion 13: How shou	ld the covered bonds distribution by interest rate be populated in section 3.8 in Tab A. HTT General?
Response 13	In the columns titled "Nominal [after hedging]", all amounts must be inserted in the line for the interest rate type they have been swapped into. For example, if all outstanding amounts have been swapped into floating rate, only this line should be filled. Total amounts should show the same figures both before and after hedging.
uestion 14: How shot	ld arrears be populated in Tab E. Optional ECB-ECAIs data?
Response 14	Performing loans should be excluded from the "1-<30 days" bucket. If a loan is in arrears, please report the entire principal amount for the loan, not just the instalment that is in arrears.

	Interest Rate Types	Index Loans: These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Denmark in 1982. All Danish index loans have index semi-annual payment dates (January 1st and July 1st). Index loans are offered as cash loans. The maturity depends on the loan type. Especially the maturity for subsidized housing depends on the size of the future inflation rate.  Fixed-rate loans: The long-term -typically 30-year -fixed-rate, callable loan is considered the most traditional mortgage loan. With this loan, the borrower knows in advance the fixed repayments throughout the term of the loan. The long-term fixed-rate mortgage loan has a prepayment option which may be exercised in two ways, i.e. the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may purchase the underlying bonds in the financial markets and deliver them to the mortgage bank. This loan type is also offered with interest-only periods.  Adjustable-rate mortgages (ARMs) were introduced in 1996 and the main advantage of ARMs is that interest rates are generally lower than those of fixed-rate loans when raised. The interest rate is generally reset at a frequency of 1, 3, 5 or 10 years and the underlying bonds are replaced by new bonds. The yield of the new bonds determines the loan rate for the period until the next interest rate resets. The lower intilla loan rate should therefore be weighted against the risk that it will increase during the loan term. An ARM may be prepal at a price of 1001 incommercion with each interest rate resets. The lower than the price of 1001 incommercion with each interest rate resets. The lower than the properties of 1001 incommercion with each interest rate resets. The lower the period until the next interest rate resets. The lower the period until the next interest rate resets.
