HG.2.3

Field Number	1. Glossary - Standard Harmonised Items	Definition
HG.1.1 HG.1.2 HG.1.3	OC Calculation: Statutory OC Calculation: Contractual OC Calculation: Voluntary	Total value of cover pool subtracted nominal value of covered bonds Minimum legal required OC of RWA ND2
	Interest Rate Types	Index Loans: These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Denmark in 1932. All Joansh index loans have index semi-annual payment dates (January 1st and July 1st). Index loans are offered as cash loans. The maturity depends on the loan type. Especially the maturity for subsidized housing depends on the size of the future inflation rate. Fixed-rate loans: The long-term—typically 30-year—fixed-rate, callable loan is considered the most traditional mortgage loan. With this loan, the borrower knows in advance the fixed repayments throughout the term of the loan. The long-term fixed-rate mortgage loan has a prepayment option which may be exercised in two ways, i.e. the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrower hedges (par) and the main advantage of ARMs is that interest rate are generally lower than those of fixed-deniments the loan rate for the period until the next interest rate
