The issuer believes	that, at the time of its issuance and based on transparency data made publicly available by	the issuer, these covered bonds would satisfy the e	eligibility criteria for Article 129(7) of the Capital Requirements Regulation (EU) 648/2012. It should be noted, however, that
whether or not exp	posures in the form of covered bonds are eligible to preferential treatment under Regulation	(EU) 648/2012 is ultimately a matter to be determi	ined by a relevant investor institution and its relevant supervisory authority and the issuer does not accept any responsibility in this regard.

# C. Harmonised Transparency Template - Glossary

The definitions below reflect the national specificities

ld Number	1. Glossary - Standard Harmonised Items	[Insert Definition Below]
HG.1.1 HG.1.2 HG.1.3	OC Calculation: Actual OC Calculation: Legal minimum OC Calculation: Committed	Total value of cover pool subtracted nominal value of covered bonds Minimum legal required OC of RWA ND2
	Interest Rate Types	Index Loans: These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Demarkt 1982. All Danish index Loans have index semi-annual payment dates (January 1st and July 1st). Index Loans are offered as cash loans. The maturity depends on the loan type. Especially the maturity for subsidized housing depends on the size of the future inflation rate. Fixed-rate loans: The long-term - typically 30-year - fixed-rate, callable loan is considered the most traditional mortgage loan. With this loan, the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may purchase the underlying bonds in the financial markets and deliver them to the mortgage bank. This loan type is also offered with interest-only periods. Adjustable-rate mortgages (ARMs) were introduced in 1996 and the main advantage of ARMs is that interest rates are generally lower than those of fixed-rate loans when raised. The interest rate is generally reset at a frequency of 1, 3, 5 or 10 years and the underlying bonds are replaced by new bonds. The yeard outing the loan rate for the period until the next interest rate reset. The lower initial loan rate should therefore be weighed against the risk that it will increase during the loan type is also offered with interest-only period. Money market based loans:
		The loan rate changes at generally three or six months. In addition, this loan type differs from ARMs as this interest rate depends on a reference rate, ie an interest rate determined in another mark The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average ), an interest rate which is quoted daily by NASDAQ. This loan type is also offered with interest-only periods. Non Capped floaters: These are loans where the rate changes at generally three or six months. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average ), an interest rate which is quoted daily by OMX NASDAQ Capped floaters: It is possible to get a loan with a floating interest rate which cannot exceed a certain level (cap). In this way, the borrower hedges against major interest rate increases. If a loan ha cap of 6%, then the interest rate can never be higher than 6%. The loan rate will track Cloor (or Euribor / Cta), as long as it does not exceed 6%. A floating-rate loan may be prepaid in two ways: et an agreed price – typically 100 or 105 – or the borrower may buy the underlying bonds at market price.
HG.1.4	Maturity Buckets of Cover assets [i.e. how is the contractual and/or expected maturity defined? What	Other: Any other loan types, which not comply with the above mentioned. Only contratual maturity is relevant and reported. Early repayments happens at borrowes discretion is among other thing depending on interest rate developmen
HG.1.5	assumptions eg, in terms of prepayments? etc.] Maturity Buckets of Covered Bonds [i.e. how is the contractual and/or expected maturity defined? What maturity structure (hard bullet, soft bullet, conditional pass through)? Under what conditions/circumstances?	cannot be anticipated by issuer. Only contratual maturity is relevant and reported. Early repayments happens at borrowes discretion is among other thing depending on interest rate developmen cannot be anticipated by issuer.
HG.1.6	Etc.] LTVs: Definition	LTV is reportet continuously. The loans are distributed from the start Itv of the loan to the marginal Itv. This means that, if the loan is first rank, it is distribute proportionaly by bracket size from 0 to the marginal Itv into the predefined brackets. If the loans has prior liens, it is distributed from the marginal Itv of the prior l the marginal Itv of the loan under consideration.
HG.1.7 HG.1.8 HG.1.9	LTVs: Calculation of property/shipping value LTVs: Applied property/shipping valuation techniques, including whether use of index, Automated Valuation	The discrete table (M4c/b4c and M4d/B4d) distributes the total fair value of each loan into a single Itv bracket, according to the marginal Itv of the loan unde consideration. Average LTV is weighted by loan balance categorised by property type.
HG.1.9 HG.1.10	Model (AVM) or on-site audits LTVs: Frequency and time of last valuation	Minimum once pr. year for commercial properties. Minimum once every third year for owner occupied.
	Explain how mortgage types are defined whether for residential housing, multi-family housing, commercial	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use.
G.1.11	real estate, etc. Same for shipping where relecvant Hedging Strategy (please explain how you address interest rate and currency risk)

#### Key Concepts )

X1	Key Concepts Explanation
X2	Key Concepts Explanation
Х3	General explanation

This transparency template is compliant with the requirements in CRR 129(7) and is used with ECBC labelled covered bonds issues by the three issuer categories below.

Mandatory tables Please note that not all tables are applicable to each issuer type and that some information is optional. Information on applicability is given below and where relevant in connection with the tables in the template.

Specialised mortgage banks Tables A, G1.1, G2-4, M1-M12, X1-3 Ship finance institutes Tables A, G1.1, G2-4, S1-S13, X1-3 Non-specialised bank CBs issuers Tables G1.1 (vecent treful capital capit Tables G1.1 (except totall capital covarage), G2-4, B1-B1, X1-3

Voluntary tables The issuer can insert voluntary tables that contain information in addition to what is contained in the Danish ECBC label tamplate. It shall be possible to distinguish mandatory an voluntory tables. The voluntary tables must be named V1....Vn, where n is the number af voluntary tables.

Voluntary tables must be maked with a colur different from the colour used forrthe mandatory tables in the Danish ECBC label tamplate.

Table X1 Key Concepts Explanation	General practice in Danish market	If issuers Key Concepts Explanation differs from general practice: State and explain in this column.
Residential versus commercial mortgages		
Description of the difference made between residential/owner occupied and commercial properties	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use.	
Describe when you classify a property as commercial?	Property which primary purpose is owner occupation is characterised as residential. Whereas properties primarily used for commercial purposes are classified as commercial (cf. below). The Danish FSA sets guidelines for the grouping of property in categories. Examples of application of which classifies property as commercial are:	
	Office	
E.g.: Private rental, Manufacturing and Manual Industries, Offices and Business Agriculture.	, · Retail/shop	
	<ul> <li>Warehouse</li> <li>Restaurants, inns etc.</li> <li>Hotels and resorts</li> <li>Congress and conference centres.</li> <li>Campsites.</li> <li>Traffic terminals, service stations, fire stations, auction and export houses.</li> <li>Agriculture</li> <li>Forestry</li> <li>Nurseries</li> <li>Ships</li> </ul>	
NPL (Non-performing loans)		
	A loan is categorised as non-performing when a borrower neglects a payment failing to pay instalments and / or interests.	
Describe how you define NPLs	The NPL rate is calculated at different time periods after the original payment date. Standard in Table A is 90 day arrear.	
	Commercial bank CB issuers adhere to the Basel definition of NPL.	
Explain how you distinguish between performing and nonperforming loans in the cover pool?	$_{\rm r}$ No distinction made. Asset substitution i not allowed for specialised mortgage banks.	
	The Basel definition of NPL's is applied for commercial bank CB issuers	
Are NPLs parts of eligible assets in cover pool? Are NPL parts of non eligible assets in cover pool?	Asset substitution i not allowed for specialised mortgage banks, hence NPLs are part a of the cover pool.	
Are loans in foreclosure procedure part of eligible assets in cover pool?	For commercial bank CB issuers NPL's are eligible assets in the cover pool. Asset substitution i not allowed for specialised mortgage banks, hence loans in foreclosure are part of the cover pool.	
	For commercial bank CB issuers loans in foreclosure procedure are eligible assets in the cover pool.	
If NPL and/or loans in foreclosure procedure are part of the covered pool which provisions are made in respect of the value of these loans in the cover pool?	5 The Danish FSA set rules for loss provisioning. In case of objective evidence of impairment provisioning for loss must be made.	

Table X2 Key Concepts Explanation	Issuer specific (N/A for some issuers)
Guaranteed loans (if part of the cover pool)	
How are the loans guaranteed? Please provide details of guarantors	
Loan-to-Value (LTV)	Legal framework for valuation and LTV-calculation follow the rules of the Danish FSA - Bekendtgørelse nr. 687 af 20. juni 2007.
Describe the method on which your LTV calculation is based	The publication contains two different ways to monitor LTV. One where loans are distributed continuously and one where they are distributed discretely. In both tables the fair value of the loans are distributed into predefined LTV bracket intervals. Table M4a/b4a and M4b/B4b displays the loans continuously. Table M4c/B4c and M4d/B4d displays the loans discretely. The continuous table(M4a/b4a and M4b/B4b) distributes the loans from the start Itv of the loan to the marginal Itv. This means that, if the loan is first rank, it & distributed proportionaly by bracket size from 0 to the marginal Itv into the predefined brackets. If the loans has prior liens, it is distributed from the marginal Itv of the prior liens to the marginal Itv of the loan under consideration. The discrete table (M4c/b4c and M4d/B4d) distributes the total fair value of each loan into a single Itv bracket, according to the marginal Itv of the loan under consideration. Area ELTV is weighted by loan balance categorised by property type.
	Example 1a below shows a case where the loan is first rank and distributed continuously. Example 1b shows the case where the loans has prior liens and distributed continuously. Example 2 below shows the discrete distribution of a loan.
Frequency of collateral valuation for the purpose of calculating the LTV	Example 1a Explanation Example of a proportionaly distribution into LTV brackets for a loan with LTV of 75 pct and a loan size of 1 million and no prior liens.
	Loan-to-value (distribution continuously)
	0-19.9 20-39.9 40-59.9 60-69.9 70-79.9 80-84.9 85-89.9 90-94.9 95-100 >100
	266.667 266.667 266.667 133.333 66.667
	Loan-to-value (distribution continuously)
	0-19.9 20-39.9 40-59.9 60-69.9 70-79.9 80-84.9 85-89.9 90-94.9 95-100 >100 - 571.429 285.714 142.857
	Example 2
	Explanation Example of discrete ("Sidste krone") distribution into LTV brackets for a loan with LTV of 75 and a loan size of 1 million In this example the 1.000.000 is distributed into the 70-79.9 interval because the LTV of the total loan is 75
	Loan-to-value (discrete/"sidste krone" distribution)
	0-19.9 20-39.9 40-59.9 60-69.9 70-79.9 80-84.9 85-89.9 90-94.9 95-100 >100 1.000.000

Table X3		D'anmark					
General explanation Table A	General practice in Danish market						
Total Balance Sheet Assets	Total balance sheet assets as reported in the interim or annual reports of the issuer,	fair value					
Total Customer Loans(fair value)	All mortgage credit loans funded by the issue of covered mortgage bonds or mortgage The tier 1 capital ratio as stipulated in DFSA regulations	e bonds measured at fair value					
Tier 1 Ratio (%) Solvency Ratio (%)	The solvency ratio as stipulated in DFSA regulations						
Outstanding Covered Bonds (fair value)	The circulating amount of covered bonds (including covered mortgage bonds and mo						
Outstanding Senior Unsecured Liabilities Senior Secured Bonds	All outstanding senior unsecured liabilities including any intra-group senior unsecured liabilities to finance OC- and LTV-ratio requirements Senior secured bonds - formerly known as JCB (§ 15)						
Guarantees (e.g. provided by states, municipals, banks)	All guarantees backing the granted loans provided by e.g. states, municipalities or ba	nks					
Net loan losses (Net loan losses and net loan loss provisions)	The item taken from the issuer's profit & loss account Value as entered in interim and annual reports and as reported to the DFSA: The low	er of the carrying amount at the time of classification and the fair value less selling costs.					
Value of acquired properties / ships (temporary possessions, end quarter)							
Total customer loans (market value) Maturity	All mortgage credit loans funded by the issue of covered mortgage bonds or mortgage Maturity distribution of all mortgage credit loans	e bonds measured at market value					
Non-performing loans (See definition in table X1)	Please see definition of Non-performing loans in table X1						
Loan loss provisions (sum of total individual and group wise loss provisions, end of quarter)	All individual and group wise læoan loss provisions as stated in the issuer's interim a	d annual accounts					
General explanation Table G1.1	General practice in Danish market						
Nominal cover pool (total value)	Sum of nominal value of covered bonds + Senior secured debt + capital. Capital is: A	dditional tier 1 capital (e.g. hybrid core capital) and Core tier 1 capital					
Transmission or liquidation proceeds to CB holders (for redemption of CBs maturing 0-1	Liquidity due to be paid out next day in connection with refinancing						
day) Overcollateralisation	Total value of cover pool - nominal value of covered bonds						
Senior secured debt	Total nominal value of senior secured debt						
Senior unsecured debt Tier 2 capital	Issuers senior unsecured liabilities targeted to finance OC- and LTV-ratio requiremen	ts in cover pool					
Additional tier 1 capital (e.g. hybrid core capital)	Subordinated debt Hybrid Tier 1 capital (perpetual debt instruments).						
Core tier 1 capital	Equity capital and retained earnings.						
General explanation Table G3	General practice in Danish market	The issuer can elaborate on the applied balance priciple. E.g. describe if stricter pratice is applied than required by law					
General balance principle	The general balance principle does not require a one-to-one balance between the loan and the bonds issued. This gives the credit institution a wider scope for taking liquidity risk than the more strict specific balance principle.						
Specific balance principle	The specific balance principle ensures a one-to-one balance between loans and bonds issued, and is used for the issuance of SDRO, SDO and RO bonds. The specific balance principle de facto implies full cash flow pass through from borrowers to investors. Under this principle daily loan origination is continuously tapped into the market, and the individual borrower loan rate is determined directly by the bond sales prince for the corresponding financing amount of bonds. All borrower payments of interest and principal match the interest and principal ayaments to investors, Bacet (borrower payments fail due one day prior to the payments to investors, active (borrower payments failed enot day prior to the bond at par. In the latter case the borrower prepayment match the bond draw down. Market risks are thus eliminated under this issuance model [i.e. interest rate risk, prepayment risks, liquidity risks and funding risks). Further, asset substitution is not possible under this issuance model.						
General explanation	General practice in Danish market						
Table G4							
One-to-one balance between terms of granted loans and bonds issued, i.e. daily tap issuance?
