The issuer believes that, at the time of its issuance and based on transparency data made publicly available by the issuer, these covered bands would satisfy the eligibility criteria for Article 129(7) of the Capital Requirements Regulation (EU) 648/2012. It should be noted, however, that

whether or not exp	posures in the form of covered bonds are eligible to preferential treatment under Regulatio	n (EU) 648/2012 is ultimately a matter to be del	termined by a relevant investor institution and its relevant supervisory authority and the issuer does not accept any responsibility in this regard.

C. Harmonised Transparency Template - Glossary

The definitions below reflect the national specificities

HG.1.1 HG.1.2 HG.1.3	OC Calculation: Actual OC Calculation: Legal minimum OC Calculation: Committed	Total value of cover pool subtracted nominal value of covered bonds Minimum legal required OC of RWA
		ND2
		Index Loans: These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Denr in 1982. All Danish index loans have index semi-annual payment dates (January 1st and July 1st). Index loans are offered as cash loans. The maturity depends on the loan type. Especially the mai for subsidized housing depends on the size of the future inflation rate.
		Fixed-rate loans: The long-term – typically 30-year – fixed-rate, callable loan is considered the most traditional mortgage loan. With this loan, the borrower knows in advance the fixed repayments throughout t term of the loan. The long-term fixed-rate mortgage loan has a prepayment option which may be exercised in two ways, i.e. the borrowers may prepay their outstanding debt at a price of 100 (or the borrowers may purchase the underlying bonds in the financial markets and deliver them to the mortgage bank. This loan type is also offered with interest-only periods.
		Adjustable Rate Mortgages: Adjustable-rate mortgages (ARMs) were introduced in 1996 and the main advantage of ARMs is that interest rates are generally lower than those of fixed-rate loans when raised. The interest rate generally reset at a frequency of 1, 3, 5 or 10 years and the underlying bonds are replaced by new bonds. The yield of the new bonds determines the loan rate for the period until the next interest rate reset. The lower initial loan rate should therefore be weighed against the risk that it will increase during the loan term. An ARM may be prepaid at a price of 100 in connection with each int rate reset. Alternatively, the borrower may prepay the loan by purchasing the bonds on market terms – as with all mortgage loans. This loan type is also offered with interest-only periods.
	Interest Rate Types	Money market based loans: The loan rate changes at generally three or six months. In addition, this loan type differs from ARMs as this interest rate depends on a reference rate, ie an interest rate determined in another market. The reference rate of DNK denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average), an interest rate which is quotee by NASDAQ. This loan type is also offered with interest-only periods.
		Non Capped floaters: These are loans where the rate changes at generally three or six months. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Intr Tomorrow/Next Average), an interest rate which is quoted daily by OMX NASDAQ Capped floaters: It is possible to get a loan with a floating interest rate which cannot exceed a certain level (cap). In this way, the borrower hedges against major interest rate increases. If a loa a cap of 5%, then the interest rate can never be higher than 6%. The loan rate will track Clibor (or Euribor / Cita), as long as it does not exceed 6%. A floating-rate loan may be prepaid in two wa either at an agreed price – typically 100 or 105 – or the borrower may buy the underlying bonds at market price.
		Other: Any other loan types, which not comply with the above mentioned.
HG.1.4		
HG.1.5	Maturity Buckets of Cover assets [i.e. how is the contractual and/or expected maturity defined? What assumptions eg, in terms of prepayments? etc.]	Only contratual maturity is relevant and reported. Early repayments happens at borrowes discretion is among other thing depending on interest rate developm and cannot be anticipated by issuer.
HG.1.6	Maturity Buckets of Covered Bonds [i.e. how is the contractual and/or expected maturity defined? What maturity structure (hard bullet, soft bullet, conditional pass through)? Under what conditions/circumstances? Etc.]	Only contratual maturity is relevant and reported. Early repayments happens at borrowes discretion is among other thing depending on interest rate developm and cannot be anticipated by issuer.
10.1.0		LTV is reportet continuously. The loans are distributed from the start Itv of the loan to the marginal Itv. This means that, if the loan is first rank, it is distribute proportionaly by bracket size from 0 to the marginal Itv into the predefined brackets. If the loans has prior liens, it is distributed from the marginal Itv of the p liens to the marginal Itv of the loan under consideration.
	LTVs: Definition	The discrete table (M4c/b4c and M4d/B4d) distributes the total fair value of each loan into a single Itv bracket, according to the marginal Itv of the Ioan und
HG.1.7		consideration. Average LTV is weighted by loan balance categorised by property type.
HG.1.8	LTVs: Calculation of property/shipping value LTVs: Applied property/shipping valuation techniques, including whether use of index, Automated	
HG.1.9	Valuation Model (AVM) or on-site audits	
HG.1.10	LTVs: Frequency and time of last valuation	Minimum once pr. year for commercial properties. Minimum once every third year for owner occupied.
IG.1.11	Explain how mortgage types are defined whether for residential housing, multi-family housing, commercial real estate, etc. Same for shipping where relecvant	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use.
HG.1.12	Hedging Strategy (please explain how you address interest rate and currency risk)	
HG.1.12 HG.1.13	Non-performing loans	A loan is categorised as non-performing when a borrower neglects a payment failing to pay instalments and / or interests.

Table X1	Oursel and the in Design method	
Key Concepts Explanation	General practice in Danish market	If issuers Key Concepts Explanation differs from general practice: State and explain in this column.
Residential versus commercial mortgages		
Description of the difference made between residential/owner occupied and commercial properties	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use.	
Describe when you classify a property as commercial?	Property which primary purpose is owner occupation is characterised as residential Whereas properties primarily used for commercial purposes are classified as commercial (cf. below). The Danish FSA sets guidelines for the grouping of property in categories. Examples of application of which classifies property as commercial are: Office	
E.g.: Private rental, Manufacturing and Manual Industries, Offices and Business Agriculture.	' Retail/shop	
	 Warehouse Restaurants, inns etc. Hotels and resorts Congress and conference centres. Campsites. Traffic terminals, service stations, fire stations, auction and export houses. Agriculture Forestry Nurseries Ships 	
NPL (Non-performing loans)		
	A loan is categorised as non-performing when a borrower neglects a payment failing to pay instalments and / or interests.	
Describe how you define NPLs	The NPL rate is calculated at different time periods after the original payment date. Standard in Table A is 90 day arrear.	
Explain how you distinguish between performing and nonperforming loans in the cove	Commercial bank CB issuers adhere to the Basel definition of NPL. No distinction made. Asset substitution i not allowed for specialised mortgage r banks.	
pool?		
Are NPLs parts of eligible assets in cover pool? Are NPL parts of non eligible assets in	The Basel definition of NPL's is applied for commercial bank CB issuers Asset substitution i not allowed for specialised mortgage banks, hence NPLs are pain of the cover pool.	t
cover pool?	For commercial bank CB issuers NPL's are eligible assets in the cover pool. Asset substitution i not allowed for specialised mortgage banks, hence loans in foreclosure are part of the cover pool.	
Are loans in foreclosure procedure part of eligible assets in cover pool?	For commercial bank CB issuers loans in foreclosure procedure are eligible assets in the cover pool.	
If NPL and/or loans in foreclosure procedure are part of the covered pool which provisions are made in respect of the value of these loans in the cover pool?	The Danish FSA set rules for loss provisioning. In case of objective evidence of impairment provisioning for loss must be made.	

Table X2 Key Concepts Explanation	Issuer specific (N/A for some issuers)								
Guaranteed loans (if part of the cover pool) How are the loans guaranteed? Please provide details of guarantors									
Loan-to-Value (LTV)	Legal framework for valuation and LTV-calculation follow the rules of the Danish FSA - Bekendtgørelse nr. 687 af 20. juni 2007								
	The publication contains two different ways to monitor LTV. One where loans are distributed continuously and one where they are distributed								
	discretely. In both tables the fair value of the loans are distributed into predefined LTV bracket intervals. Table M4a/b4a and M4b/B4b displays the loans continuously. Table M4c/B4c and M4d/B4d displays the loans discretely.								
Describe the method on which your LTV calculation is based	The continuous table[M4a/b4a and M4b/B4b] distributes the loans from the start Itv of the loan to the marginal Itv. This means that, if the loan is first rank, it is distributed proportionaly by bracket size from 0 to the marginal Itv into the predefined brackets. If the loans has prior liens, it is distributed from the marginal Itv of the prior liens to the marginal Itv of the loan under consideration.								
	The discrete table (M4c/b4c and M4d/B4d) distributes the total fair value of each loan into a single Itv bracket, according to the marginal Itv of the Ioan under consideration. Average LTV is weighted by Ioan balance categorised by property type.								
	Example 1a below shows a case where the loan is first rank and distributed continuously. Example 1b shows the case where the loans has prior liens and distributed continuously. Example 2 below shows the discrete distribution of a loan.								
Frequency of collateral valuation for the purpose of calculating the LTV	e Example 1a								
	Explanation Example of a proportionaly distribution into LTV brackets for a loan with LTV of 75 pct and a loan size of 1 million and no prior liens.								
	Loan-to-value (distribution continuously)								
	0-19.9 20-39.9 40-59.9 60-69.9 70-79.9 80-84.9 85-89.9 90-94.9 95-100 >100 266.667 266.667 266.667 133.333 66.667 - <								
	Example 1b								
	<u>Explanation</u> Example of a continuous distribution into LTV brackets for a loan with LTV of 75 and a loan size of 1 million with prior liens consisting of a loan with a LTV of 40 pct.								
	Loan-to-value (distribution continuously)								
	0-19.9 20-39.9 40-59.9 60-69.9 70-79.9 80-84.9 85-89.9 90-94.9 95-100 >100 - 571.429 285.714 142.857								
	Example 2								
	Explanation Example of discrete ("Sidste krone") distribution into LTV brackets for a loan with LTV of 75 and a loan size of 1 million In this example the 1.000.000 is distributed into the 70-79.9 interval because the LTV of the total loan is 75								
	Loan-to-value (discrete/"Sidste krone" distribution)								
	0199 20399 40599 60699 70799 80849 85899 90949 95100 >100

General explanation	General practice in Danish market				
Table A					
otal Balance Sheet Assets	Total balance sheet assets as reported in the interim or annual reports of the issue				
otal Customer Loans(fair value) er 1 Ratio (%)	All mortgage credit loans funded by the issue of covered mortgage bonds or mortgage bonds measured at fair value The tier 1 capital ratio as stipulated in DFSA regulations				
olvency Ratio (%)	Ine titer 1 capital ratio as stipulated in DFsA regulations The solvency ratio as stipulated in DFsA regulations The solvency ratio as stipulated in DFSA regulations				
utstanding Covered Bonds (fair value)	The circulating amount of covered bonds (including covered mortgage bonds and n				
utstanding Senior Unsecured Liabilities	All outstanding senior unsecured liabilities including any intra-group senior unsecured liabilities including any intra-group senior unsecured for the senior senio	red liabilities to finance OC- and LTV-ratio requirements			
enior Secured Bonds uarantees (e.g. provided by states, municipals, banks)	Senior secured bonds - formerly known as JCB (§ 15) All guarantees backing the granted loans provided by e.g. states, municipalities or b	nanks			
et loan losses (Net loan losses and net loan loss provisions)	The item taken from the issuer's profit & loss account				
alue of acquired properties / ships (temporary possessions, end quarter)	Value as entered in interim and annual reports and as reported to the DFSA; The lo	wer of the carrying amount at the time of classification and the fair value less selling costs.			
tal customer loans (market value) aturity	All mortgage credit loans funded by the issue of covered mortgage bonds or mortg Maturity distribution of all mortgage credit loans	age bonds measured at market value			
on-performing loans (See definition in table X1)	Please see definition of Non-performing loans in table X1				
an loss provisions (sum of total individual and group wise loss provisions, end of	All individual and group wise læoan loss provisions as stated in the issuer's interim	and annual accounts			
uarter)					
General explanation	General practice in Danish market				
Table G1.1 pminal cover pool (total value)	Sum of nominal value of covered bonds + Senior secured debt + capital. Capital is:	Additional tier 1 capital (e.e. hybrid core capital) and Core tier 1 capital			
ansmission or liquidation proceeds to CB holders (for redemption of CBs maturing 0-	Liquidity due to be paid out next day in connection with refinancing	Additional tier 1 capital (e.g. hybrid core capital) and core tier 1 capital			
day)					
vercollateralisation	Total value of cover pool - nominal value of covered bonds				
nior secured debt	Total nominal value of senior secured debt				
nior unsecured debt	Issuers senior unsecured liabilities targeted to finance OC- and LTV-ratio requirement	ints in cover pool			
er 2 capital	Subordinated debt				
Iditional tier 1 capital (e.g. hybrid core capital) ore tier 1 capital	Hybrid Tier 1 capital (perpetual debt instruments). Equity capital and retained earnings.				
ne ver a copital	reduct colored and recamen carnings.				
General explanation	General practice in Danish market	The issuer can elaborate on the applied balance priciple.			
Table G3		E.g. describe if stricter pratice is applied than required by law			
	The general balance principle does not require a one-to-one balance between the				
eneral balance principle	loan and the bonds issued. This gives the credit institution a wider scope for taking				
	liquidity risk than the more strict specific balance principle.				
	The specific balance principle ensures a one-to-one balance between loans and				
	bonds issued, and is used for the issuance of SDRO, SDO and RO bonds.				
	The specific balance principle de facto implies full cash flow pass through from				
	borrowers to investors. Under this principle daily loan origination is continuously				
	tapped into the market, and the individual borrower loan rate is determined directly by the bond sales price for the corresponding financing amount of bonds.				
	All borrower payments of interest and principal match the interest and principal				
pecific balance principle	payments to investors exactly (borrower payments fall due one day prior to the				
	payments to investors). Redemptions take place by borrowers' buy back of the				
	financing bond in the market at market price, or (for callable bonds) by calling the				
	bond at par. In the latter case the borrower prepayment match the bond draw				
	down.				
	Market risks are thus eliminated under this issuance model (i.e. interest rate risk,				
	prepayment risks, liquidity risks and funding risks). Further, asset substitution is				
	not possible under this issuance model.				
General explanation Table G4	General practice in Danish market				
the second belows between terms of granted lange and bends issued. In doily term		the loan terms, borrowers make principal and interest payments to mortgage banks which wer to cover daily operating costs, potential losses, and to make a profit. The margin is a			
ne-to-one balance between terms of granted loans and bonds issued, i.e. daily tap suance?	percentage of the outstanding debt which the borrower pays throughout the loan				
	to the interest margin of a bank but is generally lower. The issuance is made on a d				
ass-through cash flow from borrowers to investors?	Yes, the mortgage bank is an intermediary between persons requiring loans for the	purchase of real properties and investors funding the loans by purchasing bonds.			
sset substitution in cover pool allowed?	No, (due to Danish legislation) asset substitution is not allowed/possible.
