Table X1		
Key Concepts Explanation	General practice in Danish market	If issuers Key Concepts Explanation differs from general practice: State and explain in this column.
Residential versus commercial mortgages		
	rcial The Danish FSA sets guidelines for the grouping of property in categories. Property	
properties	type is determined by its primary use.	
	the principal of the pr	
	Property which primary purpose is owner occupation is characterised as residential.	
	Whereas properties primarily used for commercial purposes are classified as	
	commercial (cf. below).	
Describe when you classify a property as commercial?	The Danish FSA sets guidelines for the grouping of property in categories. Examples	
Describe when you classify a property as commercial?	of application of which classifies property as commercial are:	
	· Office	
E.g.: Private rental, Manufacturing and Manual Industries, Offices and Busin	ess, Retail/shop	
Agriculture.		
	Warehouse	
	Restaurants, inns etc.	
	Hotels and resorts	
	Congress and conference centres.	
	Campsites. Traffic terminals convice stations fire stations quation	
	 Traffic terminals, service stations, fire stations, auction and export houses. 	
	Agriculture	
	· Forestry	
	· Nurseries	
	· Ships	
NPL (Non-performing loans)		
	A loan is categorised as non-performing when a borrower neglects a payment failing	
	to pay instalments and / or interests.	
Describe how you define NPLs	The NPL rate is calculated at different time periods after the original payment date.	
	Standard in Table A is 90 day arrear.	
	Commercial bank CB issuers adhere to the Basel definition of NPL.	
Explain how you distinguish between performing and nonperforming loans in the co	No distinction made. Asset substitution i not allowed for specialised mortgage banks	
pool?		
P0011	The Basel definition of NPL's is applied for commercial bank CB issuers	
	Asset substitution i not allowed for specialised mortgage banks, hence NPLs are part	
Are NPLs parts of eligible assets in cover pool? Are NPL parts of non eligible asset		
cover pool?		
····	For commercial bank CB issuers NPL's are eligible assets in the cover pool.	
	Asset substitution i not allowed for specialised mortgage banks, hence loans in	
	foreclosure are part of the cover pool.	
Are loans in foreclosure procedure part of eligible assets in cover pool?	· · · F. · · · · · · · · · · · · · · · ·	
	For commercial bank CB issuers loans in foreclosure procedure are eligible assets in the cover pool.	
If NPL and/or loans in foreclosure procedure are part of the covered pool wi	hich The Danish FSA set rules for loss provisioning. In case of objective evidence of	
provisions are made in respect of the value of these loans in the cover pool?	impairment provisioning for loss must be made.	
provisions are made in respect of the value of these loans in the COVER pool?	impairment provisioning for loss must be made.	

Table X2 Key Concepts Explanation	Issuer specific (N/A for some issuers)
Guaranteed loans (if part of the cover pool)	
How are the loans guaranteed?	
Please provide details of guarantors	
Loan-to-Value (LTV)	Legal framework for valuation and LTV-calculation follow the rules of the Danish FSA - Bekendtgørelse nr. 687 af 20. juni 2007
Describe the method on which your LTV calculation is based	LTV is calculated on each property on a loan-by-loan basis, and takes into account prior-ranking loans at fair values relative to the estimated property value based on the most recent valuation or market value.
	Fair value of the loan distributed are shown utilising LTV bracket intervals. The intervals become smaller as the percentage approaches par. This publication distributes the loan continuously from the lower LTV bracket to the upper brackets relative to fair value of the collateral. For loans where a part of the loan is covered by a guarantee from public authorities (non-profit housing) the guaranteed part is placed in the lower LTV bracket.
Frequency of collateral valuation for the purpose of calculating the LTV	Example on continuously distribution into LTV brackets for a loan with fair value of 75 per cent. This example loan will be distributed with 20 per cent of the value into the lower three brackets; 10 per cent in the fourth bracket and the remaining 5 per cent of the value in the last bracket.
	Loan-to-value (distributed continuously) 0-19.9 20-39.9 40-59.9 60-69.9 70-79.9 80-84.9 95-100 >100 20 20 10 5 0 0 0 0

Table X2

	The specific balance principle ensures a one-to-one balance between loans and bonds issued, and is used for the issuance of SDRO, SDO and RO bonds.
	The specific balance principle de facto implies full cash flow pass through from borrowers to investors. Under this principle daily loan origination is continuously tapped into the market,
Specific balance principle	and the individual borrower loan rate is determined directly by the bond sales price for the corresponding financing amount of bonds. All borrower payments of interest and principal match the interest and principal payments to investors exactly (borrower payments fall due one day prior to the payments to investors). Redemptions take place by borrowers' buy back
	of the financing bond in the market at market price, or (for callable bonds) by calling the bond at par. In the latter case the borrower prepayment match the bond draw down.
	Market risks are thus eliminated under this issuance model (i.e. interest rate risk, prepayment risks, liquidity risks and funding risks). Further, asset substitution is not possible under this issuance model.
General explanation Table G4	General practice in Danish market
	Masterna hanks issue and call hands to investore who then fund the lease. During the lease terms is the second second by the determined of the second
One-to-one balance between terms of granted loans and bonds issued, i.e. daily tap issuance?	Mortgage banks issue and sell bonds to investors, who then fund the loans. During the loan terms, borrowers make principal and interest payments to mortgage banks which transfer the amounts to investors. Mortgage banks charge a margin from the borrower to cover daily operating costs, potential losses, and to make a profit. The margin is a percentage of the outstanding debt which the borrower pays throughout the loan term. The margin rate corresponds to the interest margin of a bank but is generally lower. The issuance is made on a daily basis.
	amounts to investors. Mortgage banks charge a margin from the borrower to cover daily operating costs, potential losses, and to make a profit. The margin is a percentage of the outstanding debt which the borrower pays throughout the loan term. The margin rate corresponds
