Key Concepts

Key Concepts Explanation Key Concepts Explanation X1 X2 Х3 General explanation

This transparency template is compliant with the requirements in CRR 129(7) and is used with ECBC labelled covered bonds issues by the three issuer categories below.

Mandatory tables

Please note that not all tables are applicable to each issuer type and that some information is optional. Information on applicability is given below and where relevant in connection with the tables in the template.

Specialised mortgage banks Tables A, G1.1, G2-4, M1-M12, X1-3 Ship finance institutes

Tables A, G1.1, G2-4, S1-S13, X1-3
Non-specialised bank CBs issuers

Tables G1.1 (except totall capital covarage), G2-4, B1-B1, X1-3

<u>Voluntary tables</u>
The issuer can insert voluntary tables that contain information in addition to what is contained in the Danish ECBC label tamplate. It shall be possible to distinquish

mandatory an voluntory tables.

The voluntary tables must be named V1....Vn, where n is the number af voluntary tables.

Voluntary tables must be maked with a colur different from the colour used forrthe mandatory talbles in the Danish ECBC label tamplate.

| How are the loans guaranteed? | |
| Please provide details of guarantors | |
| Loan-to-Value (LTV) | Legal framework for valuation and LTV-calculation follow the rules of the Danish FSA - Bekendtrgfreise nr. 687 af 20. juni 2007. |
| Loan-to-value (LTV) | The publication contains two different ways to monitor LTV. One where loans are distributed continuously and one where they are distributed |
| | In both tables the fair value of the loans are distributed into predefined LTV bracket intervals. Table M4a/b4a and M4b/84b displays the loans continuously. Table M4c/B4c and M4d/B4d displays the loans discretely. |
| Describe the method on which your LTV calculation is based | The continuous table(M4a/b4a and M4b/B4b) distributes the loans from the start itv of the loan to the marginal itv. This means that, if the loan is first rank, it is distributed proportionally by bracket size from 0 to the marginal itv into the predefined brackets. If the loans has prior liens, it is distributed from the marginal itv of the prior liens to the marginal itv of the loan under consideration. |
| | The discrete table (M4c/b4c and M4d/B4d) distributes the total fair value of each loan into a single Itv bracket, according to the marginal Itv of the loan under consideration. Average LTV is weighted by loan balance categorised by property type. |
| | Example 1a below shows a case where the loan is first rank and distributed continuously. Example 1b shows the case where the loans has prior liens and distributed continuously. Example 2 below shows the discrete distribution of a loan. |
| | |
| Frequency of collateral valuation for the purpose of calculating the LTV | Example 1a |
| | Explanation Example of a proportionaly distribution into LTV brackets for a loan with LTV of 75 pct and a loan size of 1 million and no prior liens. |
| | Loan-to-value (distribution continuously) |
| | |
| | 0-19.9 20-39.9 40-59.9 60-69.9 70-79.9 80-84.9 85-89.9 90-94.9 95-100 >100 |

| General explanation | General practice in Danish market |
|--|---|
| Table G1.1 | |
| Nominal cover pool (total value) | Sum of nominal value of covered bonds + Senior secured debt + capital. Capital is: Additional tier 1 capital (e.g. hybrid core capital) and Core tier 1 capital |
| Transmission or liquidation proceeds to CB holders (for redemption of CBs maturing 0-1 | Liquidity due to be paid out next day in connection with refinancing |
| day) | |
| Overcollateralisation | Total value of cover pool - nominal value of covered bonds |
| Senior secured debt | Total nominal value of senior secured debt |
| Senior unsecured debt | Issuers senior unsecured liabilities targeted to finance OC- and LTV-ratio requirements in cover pool |
| Tier 2 capital | Subordinated debt |
| Additional tier 1 capital (e.g. hybrid core capital) | Hybrid Tier 1 capital (perpetual debt instruments). |
| Core tier 1 capital | Equity capital and retained earnings. |

| General explanation | General practice in Danish market | The issuer can elaborate on the applied balance priciple. |
|----------------------------|---|---|
| Table G3 | | E.g. describe if stricter pratice is applied than required by law |
| General balance principle | The general balance principle does not require a one-to-one balance between the loan and the bonds issued. This gives the credit institution a wider scope for taking liquidity risk than the more strict specific balance principle. | |
| Specific balance principle | The specific balance principle ensures a one-to-one balance between loans and bonds issued, and is used for the issuance of SDRO, SDO and RD bonds. The specific balance principle de facto implies full cash flow pass through from borrowers to investors. Under this principle daily loan origination is continuously tapped into the market, and the individual borrower loan ratie is determined directly by the bond sales price for the corresponding financing amount of bonds. All borrower payments of interest and principal match the interest and principal payments to investors exactly (borrower payments fall due one day prior to the payments to investors.) Redemptions take place by borrowers' buy back of the financing bond in the market at market price, or (for callable bonds) by calling the bond at par. In the latter case the borrower prepayment match the bond draw down. Market risks are thus eliminated under this issuance model (i.e. interest rate risk, prepayment trisk), liquidly risks and funding risks). Further, asset substitution is not possible under this issuance model. | |

| Table G4 | eneral practice in Danish market | | | | | |
| One-to-one balance between terms of granted loans and bonds issued, i.e. daily tap issuance? | Mortgage banks issue and sell bonds to investors, who then fund the loans. During the loan terms, borrowers make principal and interest payments to mortgage banks which transfer the amounts to investors. Mortgage banks charge a margin from the borrower to cover daily operating costs, potential losses, and to make a profit. The margin is a percentage of the outstanding debt which the borrower pays throughout the loan term. The margin rate corresponds to the interest margin of a bank but is generally lower. The issuance is made on a daily basis. | | | | | |
| Pass-through cash flow from borrowers to investors? | Yes, the mortgage bank is an intermediary between persons requiring loans for the purchase of real properties and investors funding the loans by purchasing bonds. | | | | | |
| Asset substitution in cover pool allowed? | No, (due to Danish legislation) asset substitution is not allowed/possible. | | | | | |

| General explanation | General practice in Danish market | |
|-------------------------------------|--|--|
| Table M1-M5 | | |
| Owner-occupied homes | Private owned residentials used by the owner, Max LTV are 80 % (legislation). | |
| Holiday houses | Holiday houses for owners own use or for renting. Max LTV are 60 % (legislation). | |
| Subsidised Housing | Residential renting subsidesed by the goverment. Max LTV 80 %. LTVs above 80 % can be granted against full govermental guarantee, | |
| Cooperative Housing | Residential property owned and administreted by the coopereative and used by the members of the cooperative. Max LTV 80 % (legislation). | |
| Private rental | Residential property rentes out to private tenants. Max LTV 80 % (legislation). | |
| Manufacturing and Manual Industries | Industrial and manufacture buildings and warehouse for own use or for rent. Max LTV are 60 %(legislation). | |
| Office and Business | Office property and retail buildings for own use or for rent. Max LTV are 60 %(legislation). | |
| Agriculture | Property and land for agricultural use. Max LTV 70 % (legislation). | |
| Social and cultural purposes | Property used for education, kindergardens, museum and other buildings for public use. Max LTV are 70 %(legislation). | |
| Other | Property, that can not be placed in the categories above. Max LTV are 70 %(legislation). | |

|---------------------------|---|
| Table M6-M8 | |
| Index Loans | These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan ype was introduced |
| Fixed-rate loans | The long-term – typically 30-year – fixed-rate, callable loan is considered the most traditional mortgage loan. With this loan, the borrower knows in advance the fixed repayments |
| Adjustable Rate Mortgages | Adjustable-rate mortgages (ARMs) were introduced in 1996 and the main advantage of ARMs is that interest rates are generally lower than those of fixed-rate loans when raised. The |
| | The loan rate changes at generally three or six months. In addition, this loan type differs from ARMs as this interest rate depends on a reference rate, ie an interest rate determined in |
| Non Capped floaters | These are loans where the rate changes at generally three or six months. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA |
| Capped floaters | It is possible to get a loan with a floating interest rate which cannot exceed a certain level (cap). In this way, the borrower hedges against major interest rate increases. If a loan has a cap |
| Other | Any other loan types, which not comply with the above mentioned. |
