These terms and conditions together with the documents referred to in them set out the terms of use ("T&Cs") on which (a) an Issuer; (b) Investor; or (c) any other User, may make use of the Site. #### SECTION A. INVESTOR T&Cs

#### 1. DIRECTORY SERVICES

The Site is intended to provide you with certain information from Issuers regarding the self-certification of their Products as labelled covered bonds. The requirements of the Covered Bond Label Convention are intended to increase transparency, improve investor access to information, and improve liquidity in covered bonds, but they are not a substitute in any way for each User's independent investment and credit evaluation.

The Product Information on this Site is provided for your convenience only, and does not constitute any form of credit rating, an offer to sell (or the solicitation of an offer to purchase) any Product, nor does it constitute a recommendation, or investment advice (or any other type of advice) upon which reliance should be placed.

Completion of the relevant self-certification automated process by the Issuer will lead to the grant of the Covered Bond Label. The grant of such label is entirely within the control of the relevant Issuer, and we do not independently verify whether such Issuer complies with the relevant criteria. The existence of a Covered Bond Label does not represent any opinion by us about the creditworthiness of a Product, the value or price of a Product, the appropriateness of a Product's terms, or the Product's future investment performance. Nothing contained on this Site is intended to predict or project future performance.

We make no representation that the Products which are featured on the Site are suitable for you and we disclaim all liability and responsibility arising from any reliance placed on any Product Information or on the Covered Bond Label by any visitor to the Site, or by anyone who may be informed of any of its contents.

                 4. References to Capital Requirements Regulation (CRR)
The issuer believes that, at the time of its issuance and based on transparency data made publicly available by the issuer, these covered bonds would satisfy the eligibility criteria for Article 129(7) of the Capital Requirements Regulation (EU) 575/2013. It should be noted, however, that
whether or not exposures in the form of covered bonds are eligible to preferential treatment under Regulation (EU) 575/2013 is ultimately a matter to be determined by a relevant investor institution and its relevant supervisory authority and the issuer does not accept any responsibility in this regard.

# C. Harmonised Transparency Template - Glossary

### HTT 2021

The definitions below reflect the national specificities

ld Number	1. Glossary - Standard Harmonised Items	Definition
HG.1.1	OC Calculation: Actual	Total value of cover pool subtracted nominal value of covered bonds
HG.1.2	OC Calculation: Legal minimum	Minimum legal required OC of RWA
HG.1.3	OC Calculation: Committed	ND2
		Index Loans:
		These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Denmarks 1982. All Danks index loans have index semi-annual payment dates (January 1st and July 1st). Index loans are offered as cash loans. The maturity depends on the loan type. Especially the maturity finds subsidized housing depends on the size of the future inflation rate.
		Fixed-rate loans:  The long-termtypically 30-year fixed-rate, callable loan is considered the most traditional mortgage loan. With this loan, the borrower knows in advance the fixed repayments throughout the terb loan. The long-term fixed-rate mortgage loan has a prepayment option which may be exercised in two ways, i.e. the borrowers may prepay their outstanding debt at a price of 100 (par) or the borrowers may purchase the underlying bonds in the financial markets and deliver them to the mortgage bank. This loan type is also offered with interest-only periods.
	Interest Rate Types	Adjustable Rate Mortgages:  Adjustable-rate mortgages (ARMs) were introduced in 1996 and the main advantage of ARMs is that interest rates are generally lower than those of fixed-rate loans when raised. The interest rate is generally reset at a frequency of 1, 3, 5 or 10 years and the underlying bonds are replaced by new bonds. The yield of the new bonds determines the loan rate for the period until the next interest rate reset. The lower initial loan rate should therefore be weighed against the risk that it will increase during the loan term. And have be repeal at a price of 100 in connection with each interest rate Alternatively, the borrower may prepay the loan by purchasing the bonds on market terms – as with all mortgage loans. This loan type is also offered with interest-only periods.
		Money market based loans:  The loan rate changes at generally three or six months. In addition, this loan type differs from ARMs as this interest rate depends on a reference rate, ie an interest rate determined in another mark reference rate of DKX-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average), an interest rate which is quoted daily by NASDA loan type is also offered with interest-only periods.
		Non Capped floaters: These are loans where the rate changes at generally three or six months. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next-Average), an interest rate which is quoted daily by OMX NASDAQ. Capped floaters: It is possible to get a loan with a floating interest rate which cannot exceed a certain level (cap). In this way, the borrower hedges against major interest rate increases. If a loan has of 6%, then the interest rate can never be higher than 6%. The loan rate will track (Chop or Eurobor / Cita), as long as it does not exceed 6%. A floating-rate loan may be prepaid in two ways: either a agreed price – typically 100 or 105 – or the borrower may buy the underlying bonds at market price.
HG.1.4		Other: Any other loan types, which not comply with the above mentioned.
HG.1.5	Residual Life Buckets of Cover assets [i.e. how is the contractual and/or expected residual life defined? What assumptions eg. in terms of prepayments? etc.]	Only contratual maturity is relevant and reported. Early repayments happens at borrowes discretion is among other thing depending on interest rate development cannot be anticipated by issuer.
HG.1.6	Maturity Buckets of Covered Bonds [i.e. how is the contractual and/or expected maturity defined? What maturity structure (hard bullet, soft bullet, conditional pass through)? Under what conditions/circumstances? Etc.]	Only contratual maturity is relevant and reported. Early repayments happens at borrowes discretion is among other thing depending on interest rate development cannot be anticipated by issuer.
HG.1.7	LTVs: Definition	LTV is reported continuously. The loans are distributed from the start ltv of the loan to the marginal ltv. This means that, if the loan is first rank, it is distributed from the start ltv of the loan to the marginal ltv.
HG.1.7 HG.1.8	TTV- Calculation of manual falling in contrast	proportionaly by bracket size from 0 to the marginal
NG.1.6	LTVs: Calculation of property/shipping value

Residential versus commercial mortgages		
	The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use.	
	Property which primary purpose is owner occupation is characterised as residential. Whereas properties primarily used for commercial purposes are classified as commercial (cf. below).

General explanation	General practice in Danish market	The issuer can elaborate on the applied balance principle.
Table G3		E.g. describe if stricter practice is applied than required by law
General balance principle	The general balance principle does not require a one-to-one balance between the loan and the bonds issued. This gives the credit institution a wider scope for taking liquidity risk than the more strict specific balance principle.	
Specific balance principle	The specific balance principle ensures a one-to-one balance between loans and bonds issued, and is used for the issuance of SDRO, SDO and RO bonds.  The specific balance principle de facto implies full cash flow pass through from borrowers to investors. Under this principle daily loan origination is continuously tapped into the market, and the individual borrower loan rate is determined directly by the bond sales price for the corresponding financing amount of bonds. All borrower payments of interest and principal match the interest and principal payments to investors exactly (borrower payments fall due one day prior to the payments to investors.) Redemptions take place by borrowers' buy back of the financing bond in the market at market price, or flor callable bonds by calling the bond at par. In the latter case the borrower prepayment match the bond draw down.  Market risks are thus eliminated under this issuance model (i.e. interest rate risk, prepayment risks, liquidity risks and funding risks). Further, asset substitution is not possible under this issuance model.	

General explanation	General practice in Danish market			
Table G4	General practice in Danish market			
One-to-one balance between terms of granted loans and bonds issued, i.e. daily tap issuance?	Mortgage banks issue and sell bonds to investors, who then fund the loans. During the loan terms, borrowers make principal and interest payments to mortgage banks which transfer the amounts to investors. Mortgage banks charge a margin from the borrower to cover daily operating costs, potential losses, and to make a profit. The margin is a percentage of the outstanding debt which the borrower pays throughout the loan term. The margin rate corresponds to the interest margin of a bank but is generally lower. The issuance is made on a daily basis.			
Pass-through cash flow from borrowers to investors?	Yes, the mortgage bank is an intermediary between persons requiring loans for the purchase of real properties and investors funding the loans by purchasing bonds.			
Asset substitution in cover pool allowed?	No, (due to Danish legislation) asset substitution is not allowed/possible.

Table M6-M8				
Index Loans	These are loans where instalments and outstanding debt are adjusted with the development of an index which typically reflects trends in consumer prices. The loan type was introduced in Denmark in 1982. All Danish index loans have index semi-annual payment dates (January 1st and July 1st). Index loans are offered as cash loans. The maturity depends on the loan type. Especially the maturity for subsidized housing depends on the size of the future inflation rate.			
Fixed-rate loans	The long-term – typically 30-year – fixed-rate, callable loan is considered the most traditional mortgage loan. With this loan, the borrower knows in advance the fixed repayments throughout the term of the loan. The long-term fixed-rate mortgage loan has a prepayment option which may be exercised in two ways, i.e. the borrowers may prepay their outstanding debt at a price of 200 (par) or the borrowers may purchase the underlying bonds in the financial markets and deliver them to the mortgage bank. This loan type is also offered with interest-only periods.			
Adjustable Rate Mortgages	Adjustable-rate mortgages (ARMs) were introduced in 1996 and the main advantage of ARMs is that interest rates are generally lower than those of fixed-rate loans when raised. The			
Money market based loans	The loan rate changes at generally three or six months. In addition, this loan type differs from ARMs as this interest rate depends on a reference rate, i.e. an interest rate determined in another market. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average ), an interest rate which is quoted daily by OMX NASDAQ. This loan type is also offered with interest-only periods.			
Non Capped floaters	These are loans where the rate changes at generally three or six months. The reference rate of DKK-denominated loans is CIBOR (Copenhagen Interbank Offered Rate) or CITA (Copenhagen Interbank Tomorrow/Next Average ), an interest rate which is quoted daily by OMX NASDAQ			
Capped floaters	It is possible to get a loan with a floating interest rate which cannot exceed a certain level (cap). In this way, the borrower hedges against major interest rate increases. If a loan has a cap of 6%, then the interest rate can never be higher than 6%. The loan rate will track Clobr (or Euribor / Cla), as long as it does not exceed 6%. A floating-rate loan may be prepaid in two ways: either at an agreed price – typically 100 or 105 – or the borrower may buy the underfying bonds at market price.			
Other	Any other loan types, which not comply with the above mentioned.
